Natural dwellings teamed with teton dwellings in 2008 to create a series of cabins that combine the local vernacular building type with modern design in terms of efficiency, passive design, functionality, and aesthetics. These cabins have a CORE of either log or SIP construction.

They utilize advanced framing techniques, reclaimed materials, as well as an insulated envelope. Energy Star appliances, heat recovery ventilation systems, and the capacity for alternative energy generation.

Teton dwellings has continued working with Meghan to develop a full line of cabins based on the concept of 'relevant living'. For more information visit teton dwellings at www.tetondwellings.com
